Florida Crystal Joins FREPA Board

Tallahassee, April 21, 2008--The Florida Renewable Energy Producers Association (FREPA) announced that Florida Crystal, Inc. has become a new member and has joined FREPA's Board of Directors. Their board representative will be Sean Stafford.

"We are pleased that Florida Crystal, Inc. has decided to join the FREPA and will become a member of the FREPA Board of Directors," said Michael Dobson, FREPA president. "Florida Crystal has long been considered one of the pioneers in Florida when it comes to infusing biomass energy production into its daily business operations as a way to offset their energy cost and help power their community."

Renewable fuels such as ethanol and biodiesel play a vital role in reaching our nation's environmental and economic goals for clean and domestic energy sources. With a robust agricultural community and positive weather conditions, Florida is ideal to lead in renewable energy crop production for biofuels. This is also a great state for the production of solar energy, woody energy and other forms of biomass. Technologies continue to be refined and Florida is on the cutting edge with some of its current programs.

FREPA is a reliable and educated voice on behalf of renewable energy developers in Florida. We are dedicated to advocating on behalf of all renewable energy producers with an interest in project development in Florida. FREPA's main mission is to advocate for needed incentives, a favorable regulatory environment, project funding and programs that promote research and spur growth in the use of renewable energy sources in Florida. We are also a source of information on what is occurring in the energy industry as it relates to renewable energy concerns in Florida and the nation.

For more information, visit FREPA online at www.floridaenergyproducers.com.
