East Coast Ethanol, Agri-Source Fuels Join FREPA Board

Tallahassee, July 3, 2008--The Florida Renewable Energy Producers Association (FREPA) announced that East Coast Ethanol, Inc. and Agri-Source Fuels, Inc. are the association's newest members and have joined its Board of Directors.

"We are pleased that two of Florida's largest biofuels producers have decided to join FREPA and will be represented on the FREPA board," said Michael Dobson, FREPA's President and CEO. "By joining together, we can best focus on the needs of this new industry."

"Being a member of Florida Renewable Energy Producers Association (FREPA) enables Agri-Source Fuels to be more productive and informed about the status of alternative fuels in Florida," said Peggy Matthews, Agri-Source's Vice President of Governmental Affairs. "Cooperation among alternative fuels producers is imperative to establish a sustainable industry. FREPA provides a venue to discuss and resolve the ongoing regulatory roadblocks that plague alternative fuel production."

Renewable fuels such as ethanol and biodiesel play a vital role in reaching our nation's environmental and economic goals for clean and domestic energy sources. With a robust agricultural community and positive weather conditions, Florida is ideal to lead in renewable energy crop production for biofuels. This is also a great state for the production of solar energy, woody energy and other forms of biomass. Technologies continue to be refined and Florida is on the cutting edge with some of its current programs.

East Coast Ethanol, based in Columbia, South Carolina and with an office in Live Oak, Florida, plans to construct and operate four 110 million gallon corn-ethanol plants in the southeast region of the United States. For more information: www.eastcoastethanol.us.

Agri-Source Fuels, Inc., is the largest biodiesel facility in the world. The company's Dade City plant is producing 40 million gallons of biodiesel per year, and has a production capacity of 120 million gallons per year. Agri-Source Fuels also plans to open an 18 million gallon per year plant in Pensacola, Florida. For more information: www.asfuels.com

FREPA is a reliable and educated voice on behalf of renewable energy developers in Florida. We are dedicated to advocating on behalf of all renewable energy producers with an interest in project development in Florida. FREPA's main mission is to advocate for needed incentives, a favorable regulatory environment, project funding and programs that promote research and spur growth in the use of renewable energy sources in Florida. We are also a source of information on what is occurring in the energy industry as it relates to renewable energy concerns in Florida and the nation.

Please visit FREPA online at www.floridaenergyproducers.com for more information.
